SUMMARY

Third-year Computer Science student at Saveetha Engineering College with hands-on experience in web penetration testing and web development through internships. Building practical cybersecurity and ML projects including a Python-based Network IDS and a SOC monitoring tool. Interested in roles at the intersection of security engineering and secure software development.

EDUCATION

B.Tech — Computer Science and Engineering | Saveetha Engineering College *2024 – 2028*
• Currently in 3rd Year

INTERNSHIP EXPERIENCE

Cybersecurity Intern — Web Penetration Tester | BugBustersLab *Jul 2026*
• Performed web application security testing following structured assessment workflows
• Conducted reconnaissance, endpoint enumeration, and vulnerability validation across target applications
• Applied OWASP Top 10 concepts to identify and document common web vulnerabilities
• Produced professional security documentation including findings and remediation notes
• Developed familiarity with penetration testing methodologies and professional reporting standards

Junior Web Developer | Assure Facility Management Services *Jun 2025*
• Assisted in developing and maintaining internal company web applications
• Supported both frontend and backend development tasks alongside the core development team

TECHNICAL SKILLS

Languages: Python · JavaScript · Java · SQL
Cybersecurity: Web Penetration Testing · OWASP Top 10 · Network Security · SOC Fundamentals · Vulnerability Assessment
Tools: Burp Suite · Nmap · Wireshark · Scapy · Git · Linux · Docker
ML / Data: Scikit-learn · Pandas · NumPy · TextBlob · XGBoost
Frameworks: React · FastAPI · Streamlit · Tailwind CSS

PROJECTS

Sentinel IDS | Python · Scapy · SQLite · Networking *Ongoing*
• Building a Network Intrusion Detection System from scratch with a modular, configurable detection engine
• Implemented real-time packet capture via Scapy with SYN Flood and Port Scan detection rules
• Developed a live SOC-style dashboard with alert logging to SQLite and PDF/TXT report generation
• Added offline PCAP analysis support and configurable detection rules through the dashboard UI

VoiceForAll | IBM Z Datathon | Python · Streamlit · TextBlob · Plotly
• Built an accessibility reporting platform allowing users to submit text or voice-based barrier reports
• Integrated TextBlob NLP for sentiment and urgency analysis on incoming reports

- Visualized report trends on an interactive Plotly map; deployed live on Streamlit Cloud

Mini SOC | Security Demo | PowerShell · Windows Defender · Python

- Demonstrated a SOC monitoring workflow using Windows Defender and a custom PowerShell monitor
- Monitored Windows Event Logs and simulated analyst alert triage and response procedures

EduMate | ITERYX'25 Hackathon | Python · OpenCV · ML · React

- Developed an adaptive learning platform using facial expression recognition to detect student engagement states
- System adjusted content pacing in real time based on detected confusion or frustration signals

Policy-Based Execution Sandbox for Autonomous AI Agents

Research Stage

- Exploring runtime policy enforcement for LLM agents using Linux seccomp/ptrace syscall interception and OPA
- Investigating LSTM-based behavioral anomaly detection to identify prompt injection and jailbreak patterns

CERTIFICATIONS

- IT Fundamentals for Cybersecurity Specialization — IBM
- Computer Forensics Specialization — Infosec
- Introduction to Security Principles in Cloud Computing — Google Cloud
- Cybersecurity Compliance Framework, Standards & Regulations — IBM
- DBMS Course — Scaler
